# Keeler LED Professional Streak Retinoscope

## *The World's First LED Retinoscope*

Keeler's new LED Professional is the first Retinoscope on the market with LED illumination. LED light provides a clearer, crisper and brighter streak view of the retina, with greater contrast, which in turn means a quicker and more accurate diagnosis.

LED bulbs last much longer than conventional halogen bulbs and are also much more energy efficient. Long-lasting bulbs mean you can get on with the task in hand and not worry about changing bulbs. Energy-efficient bulbs mean lower running costs and less impact on the environment.

A unique and highly useful feature of all Keeler Retinoscopes is a patented neutralisation check which provides a rapid confirmation of neutralisation. The beam can be changed from divergent to convergent, allowing the user to cross-check the accuracy of a neutral point. This ability to double-check neutrality in the upper position guarantees correct assessment every time.

- **Greater contrast**
- **Crisp image quality**
- **Increased power efficiency**
- **Long life**
